EDUCATION

BML Munjal University <i>B.Tech in Computer Science Engineering 8.4 CGPA</i>	Gurugram, Haryana 2025 – 2029
Sahoday Senior Secondary School <i>Senior Secondary (PCM + CS)</i>	New Delhi 2025

EXPERIENCE

BML Munjal University <i>AI & Data Automation Intern</i>	Gurugram, Haryana May 2026 – Present
– Developed an automated academic intelligence system using Python and Playwright to scrape, process, and organize faculty profiles and research metadata from global universities. – Built robust data-processing workflows with automated filtering, validation, and deduplication, leveraging local LLMs for profile classification and domain analysis. – Implemented structured logging, error handling, and automated Excel/JSON database generation, minimizing manual pipeline management.	
Freelance Developer <i>Independent Contractor</i>	New Delhi Jan 2024 – Present
– Built 5+ IoT prototypes using ESP32, sensors, and real-time data workflows. – Implemented MQTT-based systems enabling low-latency (1–2s) communication. – Developed firmware modules and debugging tools for microcontroller systems.	

PROJECTS

PortAI — Institutional-Grade Financial Intelligence Next.js 14, FastAPI, LangGraph, Supabase	2026
– Architected a 6-layer multi-agent AI pipeline using LangGraph, LangChain, and LLMs (GPT-4o/Claude 3.5) to run real-time investment analysis simulating 15+ legendary investor personas. – Built a responsive Next.js dashboard with TradingView charts, paper trading, and FastAPI services integrated with Supabase for secure Auth, user portfolios, and real-time Telegram/WhatsApp alerts.	
AURA — IoT Wellness Monitoring System ESP32, Raspberry Pi, MQTT, MPU6050, Python	2025
– Built a camera-free safety system connecting an ESP32 node and Raspberry Pi hub using MQTT (< 2s latency). – Developed ESP32 firmware for MPU6050 fall detection with EMA filtering, and Pi-side MQ5 gas monitor alerts.	
LYNX — AI + IoT Navigation System Flutter, Dart, ESP32, Flutter Map, LatLong2	2025
– Engineered a Flutter app streaming real-time environmental telemetry from an ESP32 sensor client over HTTP. – Implemented dynamic routing via Flutter Map and edge weather prediction algorithms to redirect around storm fronts.	

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, TypeScript, Dart, HTML/CSS
Core CS: Data Structures & Algorithms, Object-Oriented Programming
Frameworks & Tools: React, Next.js, Flutter, Node.js, Express.js, Tailwind CSS, LangGraph, LangChain, Playwright, MQTT, Flask, Azure ML Studio, Azure Cognitive Services
Embedded Systems: ESP32, ESP-IDF, Arduino, Sensors, GPIO, UART, I2C, SPI
Networking & Protocols: MQTT, REST APIs, WebSockets, TCP/IP
Cloud Platforms: Microsoft Azure, AWS (S3, VPC)
ML / CV: NumPy, Pandas, Scikit-learn, Azure CV APIs
Databases: PostgreSQL, MongoDB, Supabase, SQL
Dev Tools: Git, Docker, Kubernetes, Linux, Raspberry Pi, VS Code
Other: Figma, Flutter Map, Leaflet / GIS Integration

CERTIFICATIONS

Microsoft Azure — Computer Vision, REST API (2025)
Neo4j Certified Professional (2025), AWS VPC (2025)
ISRO — Remote Sensing (2025), ICT360 Design Championship (Runner-Up)
